

Finally, an all natural joint support formula that is truly effective and truly safe. Derived after over 30 years of research and laboratory testing, JV1[®] performs far beyond that of all other supplements or support methodologies, including products like SAM-e, Glucosamine and Chondroitin-based compounds

Obesity is another factor relating to joint pain. More than half of American adults are currently overweight or obese. Being overweight increases the load placed on the joints, which can speed up cartilage wear and tear. According to Johns Hopkins Arthritis Center, being only 10 pounds overweight increases the force on the knee by 30-60 pounds with each step. Population studies have shown a relationship of being overweight as a factor in developing osteoarthritis of the knee (Anderson, 1988).

GENDER SPECIFIC FORMULAS

Beginning around the age of 15, the physical differences between men and women grow pronouncedly apart. As divergent as their morphology, their nutritional requirements differ uniquely as well. Formulated in versions for men and women, JV1[®] provides micronutrients distinctive to the needs of cells relating to joint and muscle function. Positive rejuvenation can be experienced after only 3 weeks of continued use. JV1[®] will prove to be the most effective joint support product you have ever used.

OSTEOARTHRITIS (OA) HEALTH FACTS

There are at the present nearly 70 million people in the U.S. experiencing arthritis or some form of joint inflammation. Arthritis affects nearly 25% of the U.S. population.

OA is characterized by the breakdown of the joint's cartilage. Cartilage breakdown causes bones to rub against each other, causing pain and loss of movement. The symptoms of OA can range from very mild to very severe. OA can affect hands and weight-bearing joints such as knees, hips, spine, and feet.

WHY SPRAYS?

SOLUTIONS IE[®] Intra-Oral Sprays are easily and rapidly absorbed, making vital nutrients immediately available to the living cells. Utilizing this unique plasma to plasma nutrient delivery system, there is virtually no digestion necessary, leaving no residual toxins to burden or impair digestive function.

As you can see from the chart below, pills and capsules are obsolete as an effective means of delivering essential nutrients to the cells of the body. These conclusions are published in the most current "Physicians Desk Reference" manual.

Delivery Method Effectiveness

90%+	Intra-Oral Sprays
75%	Intra-Muscular Injection
55%	Sublingual (Under-the-tongue) Liquid
40%	Trans-dermal Patch
20-25%	Gel Capsule
0-10%	Pill

Intra-Oral Sprays by SOLUTIONS IE[®] deliver close to 100% of the usable nutrients directly into the target cells within seconds.

JOINT PAIN AND OBESITY

An estimated \$45 billion is spent annually in the U.S. on treating diseases associated with being overweight. With obesity on the rise and more than half of American adults currently overweight or obese, this will have its own impact on joint pain. Experts say that being overweight increases the load placed on the joints, which could possibly speed up cartilage wear and tear. According to Johns Hopkins Arthritis Center, being only 10 pounds overweight increases the force on the knee by 30-60 pounds with each step. Population studies have shown a relationship of being overweight as a factor in developing osteoarthritis of the knee (Anderson, 1988).

PERSONAL SUCCESS

“Being diagnosed with Osteoarthritis at the age of 14, I had suffered from severe joint pain for over 40 years, trying everything from pain killers to Glucosamine and Chondroitin for relief. After taking JV1[®] [men] for only 3 weeks, I was completely pain free. I have now maintained near perfect joint health for over 3 years.”

Ross Bratt

SUGGESTED USE

- Take 4 sprays, 3 times per day.

This formula will provide you with a 1 month supply of superior nutritional support when taken as directed.
